

## \*\* HP iPAQ (PocketPC 2002) with PCMCIA WiFi card \*\*

**1. Insert the PCMCIA 802.11b/g wireless card\* into your iPAQ, and install the drivers for the card. If your iPAQ has a built-in wireless card, make sure the software is installed and the card functions as required. Here we take an Enterasys RoamAbout 802.11b wireless card as an example.**

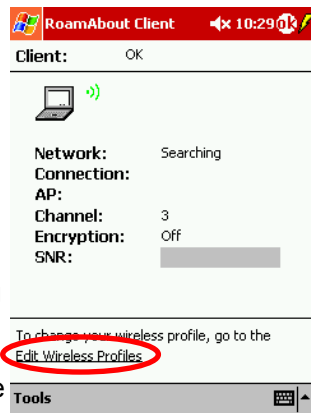

**2. Launch the Enterasys RoamAbout Client Utility**

There are several ways to do this, e.g.:

i) Click the **RoamAbout Client** icon in the **System Tray**.

ii) Or from the **Start** menu, select **RoamAbout Client**.

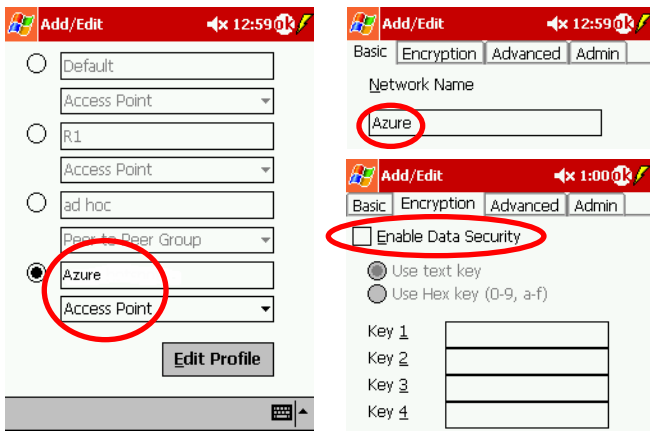

The following screen will be displayed.

**3. Set up an Azure Wireless Profile (or select the existing One) to join Azure network**

• Click **Edit Wireless Profile** link at the bottom left hand side to access the profile list.

- Choose one of the four profiles and change its name to **Azure** and change the access type to **Access Point**. Click **Edit Profile** to edit the profile.
- In **Basic** tab, type **Azure** as Network Name.
- In **Encryption** tab, **DO NOT Enable Data Security**.
- Click **ok** on the top right hand corner of the screen to save and activate the profile.

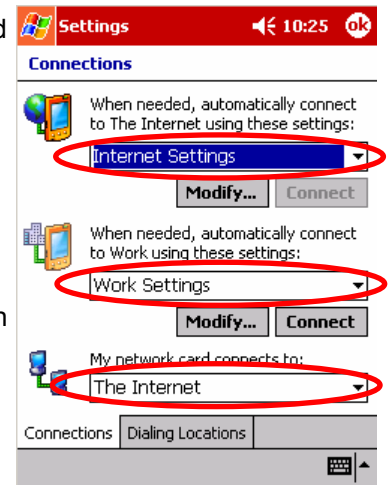

**4. Modify the Connections Settings**

From the **Start** menu, select **Settings**, click the **Connections** tab, then click the **Connections** icon.

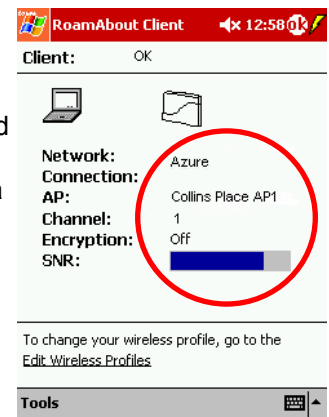

- Choose **Internet Settings** from the first drop-down box.
  - Choose **Work Settings** from the second drop-down box.
  - Choose **The Internet** from the third drop-down box.
- NOTE:** If you have previously modified the **Internet Settings** or **Work Settings** then you will need to change them back to their factory defaults.

• Click **ok** at top right hand corner of the screen to save and activate the settings. **You may need to reset your PDA to complete the process.** When the PDA powers up again, check the connection settings to make sure they have been applied correctly.

**5. Confirm connection and signal strength**

After the successful configuration and the restart of your PDA, click the **RoamAbout Client** icon in the **System Tray** again and the utility windows will appear as below. The stacked bars show the **Link Quality** and the icon also shows that you're connected to Azure network.

**6. Open your web browser**

Open any valid web page, and within a few seconds the Azure network will send you a login screen. Follow the onscreen login process to select your preferred billing option (through your ISP, via credit card, or by using a pre-paid card) and complete the login process.

**7. Once you have finished the login process, you can browse the Internet, use your email, or launch a Virtual Private Network (or other secure encrypted connection) to your corporate network. To logoff, disconnect any VPNs and then click the Logout button.**

For further technical assistance, call your Internet Service Provider (ISP) if they are an Azure Partner, or call Azure Wireless Technical Support on 1300 55 22 15

\* These cards are the standard wireless cards used in most home/office wireless LAN's. Wireless cards can be purchased from any computer retailer/vendor.
