

# High-speed Wireless Internet Detailed Login Instructions

## Windows Vista

**NOTE:** This document is intended as a troubleshooting guide. If you are automatically redirected to the Azure Wireless login screen, these settings do not need to be altered.

### 1. Activate your wireless card

You may need to turn on your inbuilt wireless card. this is typically done using a physical switch on the casing of your laptop, or you may need to try a softkey combination. If you are using an add-on wireless card please make sure that is inserted into your computer.

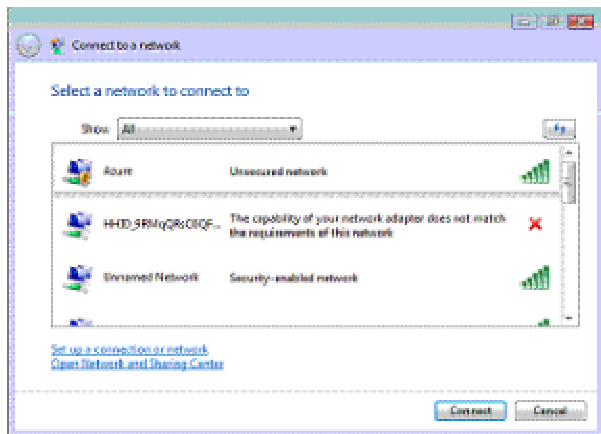

### 2. Scan and connect to the Azure network

You need to access the "connect to a network" dialog, which can be accessed in one of the following ways:

- clicking "Start" -> "Connect to"
- from the "Manage wireless connections" dialog box
- From the "Connect/ Disconnect" context menu option of a wireless network adaptor in the Network Connections folder.

Select the Azure network by clicking on it to highlight it. Then press connect.

If everything goes well you should be connected to the Azure network.

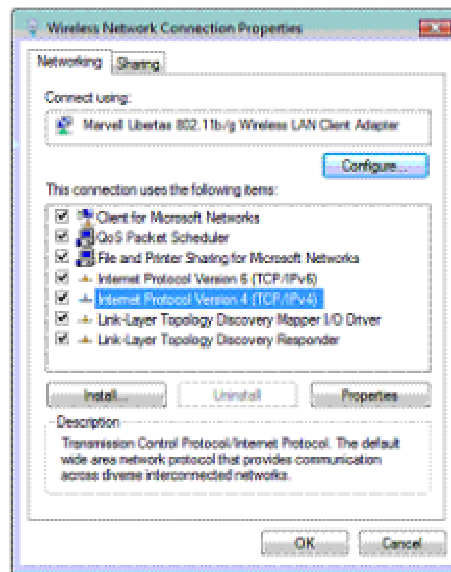

### 3. Adjusting IP settings

To adjust your IP settings, you will need to get the "Wireless Network Connection Properties" dialog box. There are numerous ways to find this dialog:

- The easiest is to go to "Control Panel"
- If you are not using the classic view. please click on "Network and Internet"
- If you are using classic view (of control panel), you can click on "Network and Sharing Center".
- Then you will need to click "Manage network connections".
- To bring up the properties box, you will have to left click on the wireless connection and select "Properties".

- Select "Internet Protocol Version 4 (TCP/IPv4)" and click "Properties"
- Now make sure there is a dot in "Obtain an IP address automatically" and "Obtain DNS server address automatically". Click "OK" to save the changes.

### 4. Adjusting browser settings

If the browser does not show the login page please make the following changes:

- Open Internet Explorer, click on the "Tools" menu (usually in the top right hand side).
- First check to see that there is NOT a tick next to "Work Online"
- Next select "Internet Options"
- From "Internet Options" select "Connections" and click on "LAN Settings".
- Make sure NONE of the tick boxes in the "LAN Settings" dialog are ticked.
- Click "OK" to save any changes you have made
- Close Internet Explorer and restart.
